

Develop a Visual Basic project which uses a form which includes five command buttons - one for each of Monday, Tuesday, Wednesday, Thursday, and Friday - and a label. When one of these command buttons is pressed, the program displays in the label your first class for that day of the week.

For example, pressing the Wednesday button might result in the display of:
My first class on Wednesday is ENG 101 at 9:15.

Note: You should follow these guidelines with all your assignments:

- 1) Create a folder for each project; save all the computer files for the project in that folder.
- 2) Use forms whose objects are nicely sized and placed: like objects should be of the same size; adjacent objects should line up; and so on.
- 3) Use the naming convention for objects: names of labels begin with lbl; names of command buttons begin with cmd; and so on.
- 4) Use names for objects and variables which are descriptive. For example, a "CALCULATE" button might be named cmdcalculate.
- 5) Include a label in the lower right corner of the form whose caption is your name.
