

Develop a Visual Basic program to serve as a simple calculator. Command buttons are to be used to allow input of numbers. The method for displaying results is the programmer's prerogative. A command button is to be included to allow the user to exit from the program. Your name should be included in a label in the bottom right hand corner of the form.

Print out the source code and turn it in with your diskette. Be sure to print out all of the code for the entire project.

The due date for this program is Thursday, October 4, 2001. Late assignments will not be accepted without prior authorization from the instructor.
