

Programs 7 and 8Program 7

Write a program to store at least 5 names, numeric grades, and letter grades in a random access file. The letter grade is to be computed by the program using a select case block. Use a user defined data type in a module to define a record and fields. The user is to be prompted to enter name and numeric grade.

Program 8

Write a program to read data from the random access file created in program 6. Add the names to a list box or combo box. When the user selects a name, display the person's grade in a picture box or a text box.

Both programs are due on April 25, 2001.
